

AMENDMENTS TO THE SPECIFICATION

Replace the paragraph beginning at page 8, line 20 with the following amended paragraph:

The present invention comprises a web-based enterprise-wide project management method to enhance the idea-to-market process, which has three development phases, and incorporates workflow tracking. A "project" ~~Aproject~~ is generated when an idea for a new product or service or a change to an existing product or service is generated within the organization and submitted to the automated idea verification and implementation system of the present invention. This project, depending on its type, will have a variable number of tasks and documents that are completed as the project progresses. Project data, its documents and tasks are managed, contained, and can be monitored as the project progresses within the inventive system.

Replace the paragraph beginning at page 21, line 10 with the following amended paragraph:

In another aspect, the graphical user interface provided for users of system 400 can provide contextual help, such as best practice tips and so forth, as a "pop-up" or a "scroll in" that appears on the user's display screen when the user moves the cursor arrow over and rests it on a button or heading in the screen (e.g., see FIG. 7A and FIG. 7G). The project development system also has built-in e-mail functionality capability. Using internet e-mail, e-mail documents can be separately sent or received without the user needing to back out of the screen being

viewed. E-mailed documents can be sent as an attachment or the recipient can be given a URL to automatically go retrieve it when the attachment is clicked on. When sending e-mail, a team tab feature is also provided permitting a user to check a box next to a name(s) of desired team member recipients without having to scroll out of a screen to send the e-mail. The inventive system also has enhanced report feature for report viewing and printing functionalities, such that specific project timelines in tabular form, GANTT charts, comments reports, issue reports, and so forth, are printable browser-based documents.
